Chapter 7 Incompressible Flow Solutions Incompressible flows are by far the most common type of flows encountered in engineering problems. They are different than compressible flows mainly due to

the missing equation of state. Density is not an unknown and pressure does not have any thermodynamic meaning.

This chapter presents some issues in incompressible fluid dynamics, both in

the continuum and in numerical simulation. One of the principle themes considered is the common, simple, and convenient mathematical model of a fluid that states that the mass conservation law is one that requires the fluid to be incompressible everywhere and for all time
